

MISDIAGNOSIS OF ACUTE AGRIC DISSECTION A MULTI-CENTRE 10-YEAR RETROSPECTIVE **OBSERVATIONAL COHORT STUDY**

Dr Farhin Holia¹, Dr Samy Sadek², Gareth Owens³

1. Chief Investigator; Emergency Medicine Registrar, Barts Health NHS Trust 2. Consultant in Emergency Medicine and Pre-Hospital Care, Barts Health NHS Trust 3. Think Aorta Campaign Lead and Chair of national patient charity Aortic Dissection Awareness UK & Ireland

INTRODUCTION

Acute Aortic Dissection (AAD) is a national patient safety issue. It is a life-threatening, time-critical disease that carries a high mortality rate and can be challenging to diagnose due to its diverse presentation.

3,906 Aortic Dissection 1,242 Events^[1] Hospital (a life-threatening medical emergency) Admissions due to Aortic Dissection^[2]

OBJECTIVES

To identify the number and rate of missed or delayed diagnosis of AAD in a large NHS Trust that covers North-East London (Barts Health NHS Trust)

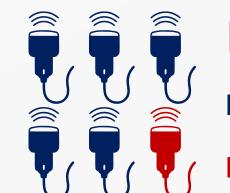

To identify themes around missed or delayed diagnosis of AAD

RESULTS

DEMOGRAPHICS **TOTAL PATIENTS (n=21) GENDERS** 10% (n=2) ■ Type A ■ Type B 90% (n=19) ■ Man (57%) Pregnant (5%) ■ Woman (43%) ■ Post partum (10%) AGE GROUP (YEARS OLD) Number of Patients 0 0 0 3 (14%) 3 (14%) 5 (24%) 4 (19%) 5 (24%) (5%) **60-70 30-40** 40-50 80-90 **50-60 70-80 Age of Patients** SYMPTOMS 14 15 Number of symptoms 6 ■ Sudden Onset Severe Pain (67%) ■ Chest Pain (67%) ■ Abdominal Pain (19%) ■ Back Pain (28%) ■ Flank Pain (5%) Neurological Symptoms (19%) ■ Shortness of Breath (19%) ■ Syncope (10%) **Symptoms** Risk factor hypertension present in 71% (n=15)

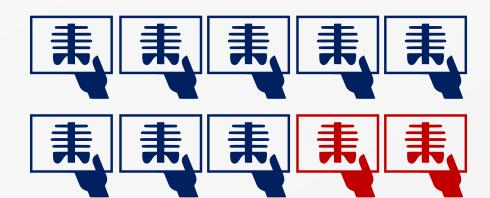

3 INVESTIGATION AND SCORING TOOLS

■ Sepsis (10%)

POCUS (n=6)

■ Normal (57%) Abnormal (5%)

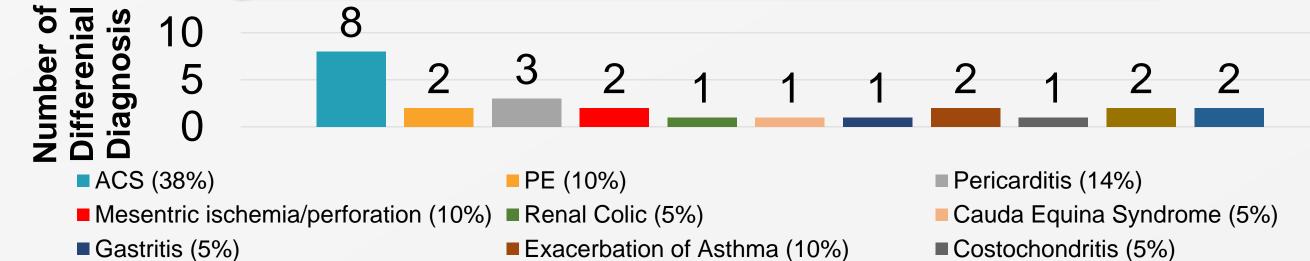

CHEST X-RAY (n=10) ■ Normal (38%)

Abnormal (9%)

Aortic Dissection Detection Risk Score		
Score	Frequency	Percentage
0	4	19%
1	6	29%
2	11	52%

4 DIFFERENTIAL DIAGNOSIS CONSIDERED

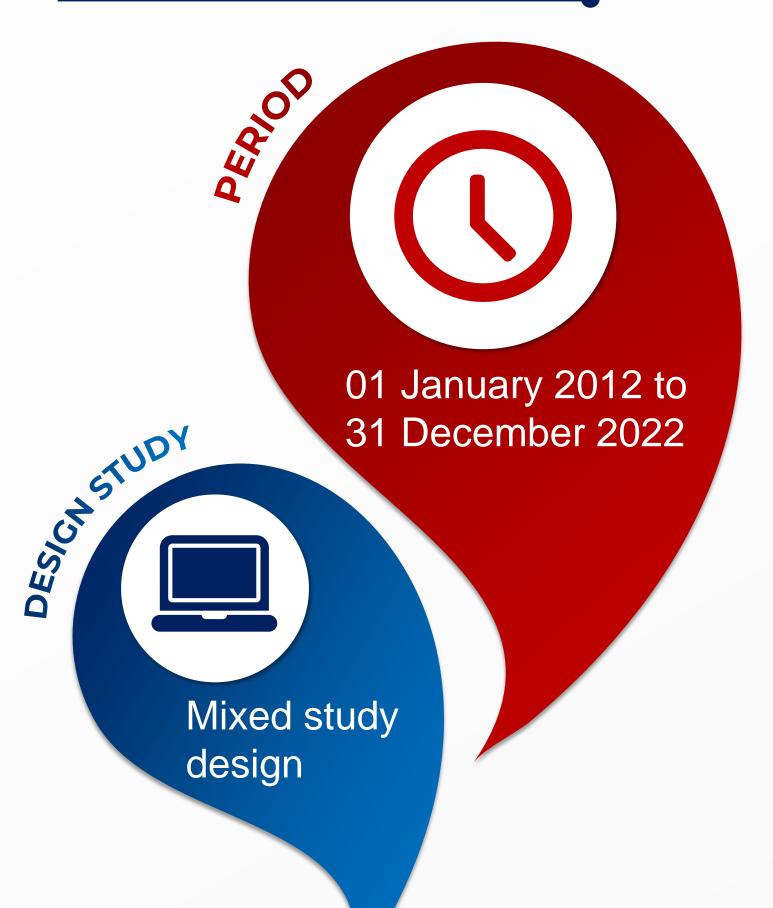

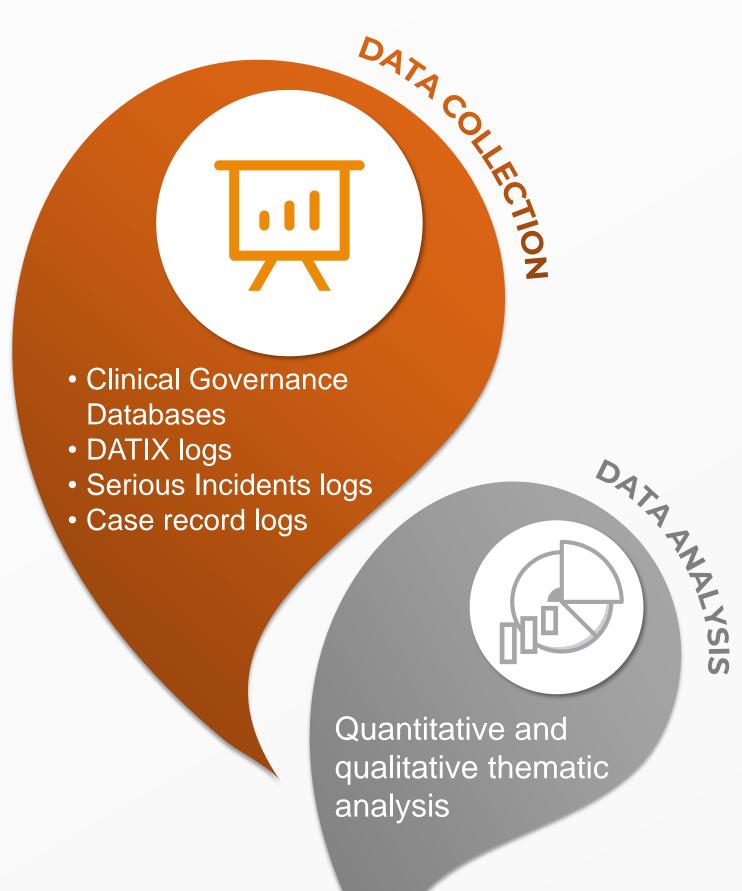

■ Stroke (10%)

Differential Diagnosis

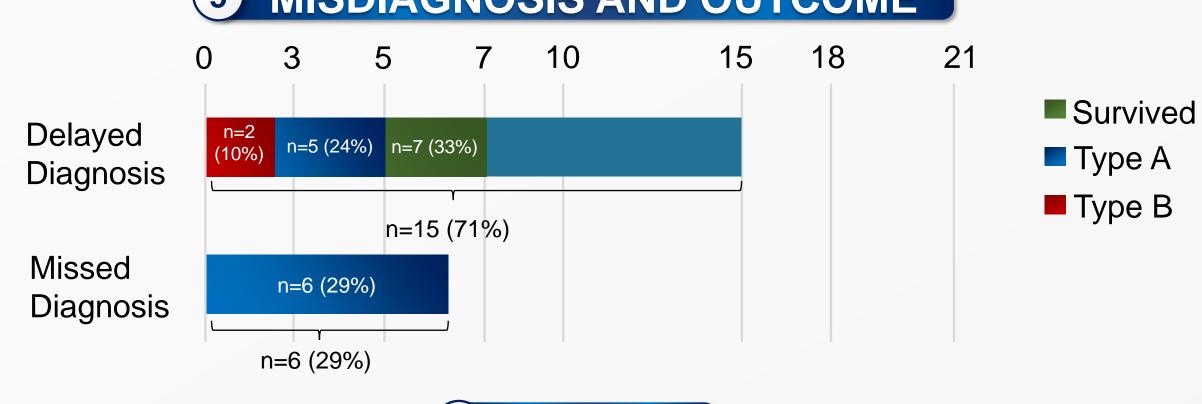

Author contact farhin.holia@nhs.net @em_enthusiast

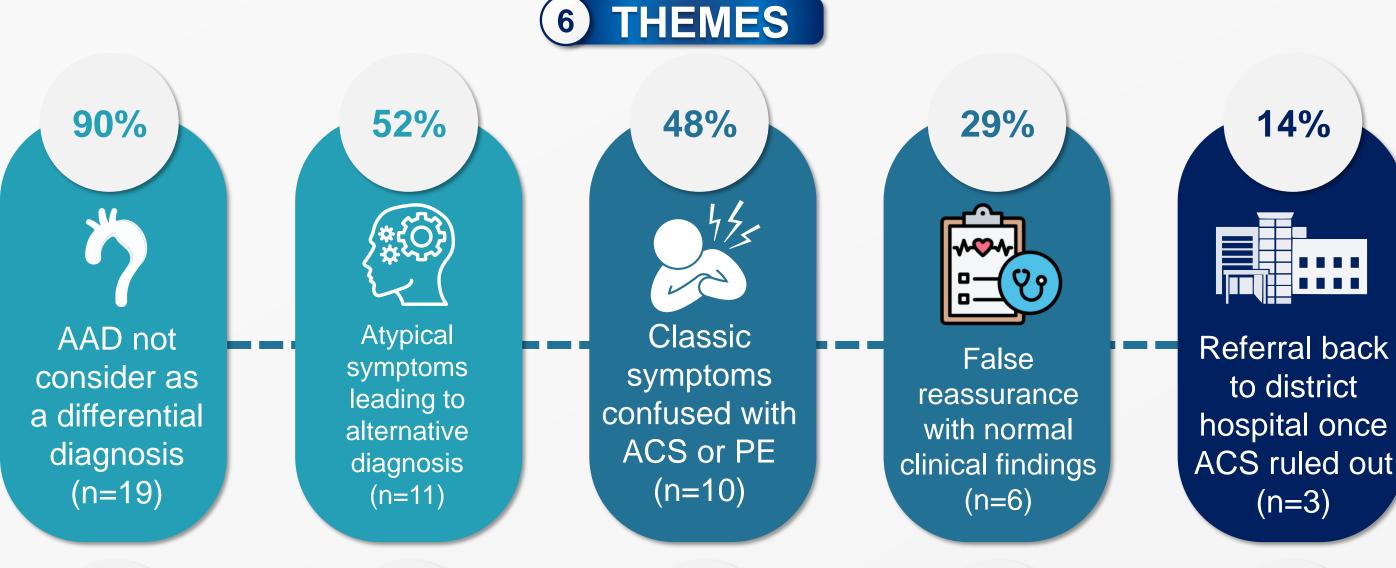

METHODS

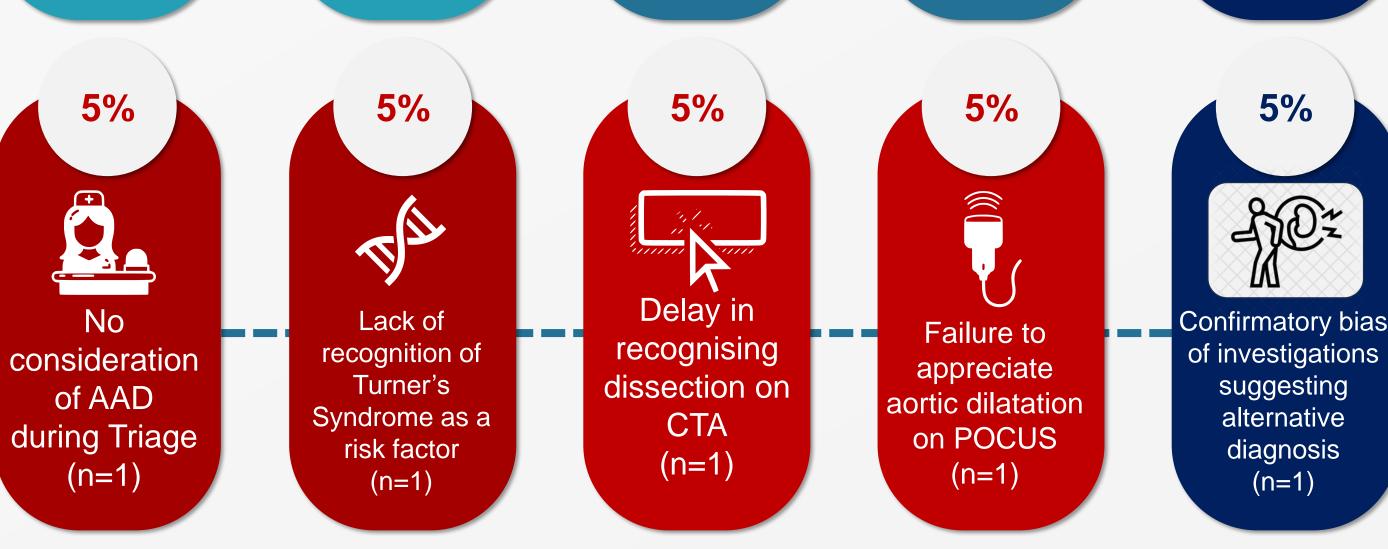

MISDIAGNOSIS AND OUTCOME

CONCLUSION AND RECOMMENDATION

Diagnostic Challenges

Misdiagnosis of AAD is often caused by atypical presentations and knowledge gaps.

Education

Increasing awareness and developing comprehensive education bundle around AAD diagnosis is imperative in pre-hospital and ED setting.

Pathway

Advocacy for developing a standardized AAD pathway to optimize best outcomes.

Research

Further prospective studies are recommended across the U.K.

National Registry

Establishment of a national registry to support future research.
